

Assembly of stainless steel membrane cover

LIPP stainless steel membrane cover easily spanning up to 50 m in diameter

The LIPP stainless steel membrane provides the perfect solution for already existing steel or reinforced concrete tanks, as well as for LIPP System containers: A free-span light membrane construction made of stainless steel allows spanning containers with up to 50 m in diameter. Thus unsupported, the construction withstands extreme snow loads and heavy winds.

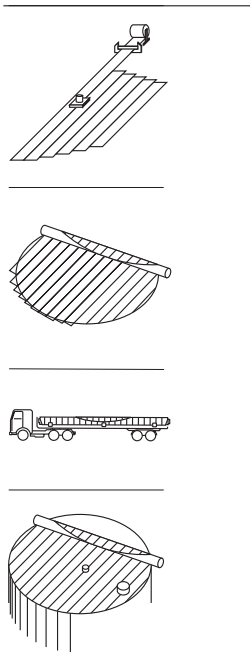

The lightweight construction is also suitable for sealing tanks containing volatile and explosive substances.

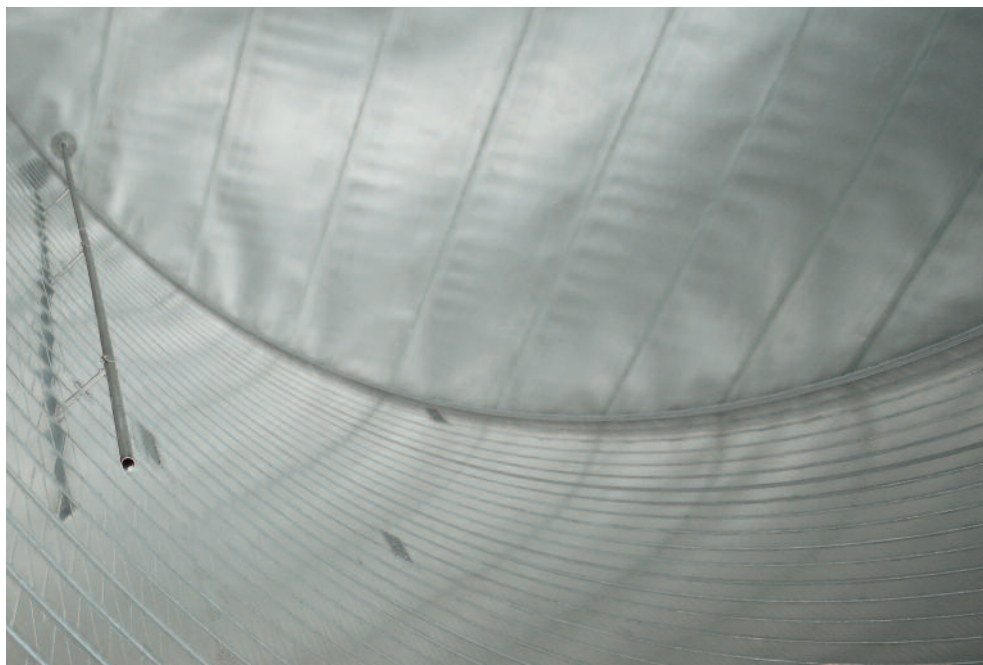

LIPP storage tank for fermentation residues with 4000 m³ capacity

Complete prefabrication of the membrane in the plant

Interior view of LIPP tank with stainless steel membrane cover

Key benefits

- . corrosion resistant
- . impermeable to gas
- . impervious to UV radiation
- . no welding work on site
- . suitable for steel and concrete tanks
- . subsequent mounting possible
