Intelligent PV substructure for cylindrical structures

## LIGHTHOUSE PROJECT:

### LIPP-BUFFER TANK AS A SOLAR POWER PLANT

On an area of around 1,300 m<sup>2</sup>,  
640 frameless glass-glass modules with a  
frosted surface generate a total output of 253 kWp.  
This means that the façade supplies around  
160,000 to 170,000 kWh per year - a large proportion of this  
in the winter months, when demand is at its highest.
