LIGHTHOUSE PROJECT:

LIPP-BUFFER TANK AS A SOLAR POWER PLANT

On an area of around 1,300 m²,
640 frameless glass-glass modules with a
frosted surface generate a total output of 253 kWp.

This means that the façade supplies around
160,000 to 170,000 kWh per year - a large proportion of this
in the winter months, when demand is at its highest.
